\*1 The Test Solution may be difficult to flow on a test stick.

\*2 The food extract was diluted five-fold (1:5 dilution) with a blank extraction buffer.

These samples were tested by following the instruction of Rapid Test Pro II (using Recommended Extraction Method), except Kelp 200-fold extract, Polysaccharide and Thickener samples.

These results can be changed by the difference of kit's lot number or the sample's species or production area.
